**Subject:** Heavy metal stream sample results August 9

Here is the spreadsheet for the results for samples collected at 3 stations on Sunday August 9, 2015. I will be placing this on Allison's P drive file so others can place it on the Gold King Mine web page.

Please note there are 3 tabs and that all must go up together. However the webmaster wants to organize the 3 files is fine as long as the files are all co-located.

There is no statement explaining our findings and perhaps that is needed. The bottom line is that

there are no violations in this data of any New Mexico water quality standards.

Let me know if you have questions. Sorry this took so long—4 people spent a great deal of time today to get this in the shape it is now. (Not looking for thanks or a pay raise. Just wanted you to know how difficult water quality work is.)
